

Amateur Radio is a valuable resource and must be protected!

Uses of Amateur Radio have proven to be an invaluable resource in many times of need. Such as: Hams were on scene providing COM for 9/11, Forest Fires, Floods, Earthquakes, and much more.

BPL will introduce interference levels to many forms of RF communication. The frequency spectrums allocated for this type of technology shouldn't be permitted. Other effects of this technology may have even more of an impact on society and remains unknown.

I trust that the FCC will remember the promise to protect licensed users of the spectrum.

Sincerely,

Mark
